

QuickFire
Emergency Management
What Do We Do?

QuickFire EM is a dynamic company that offers a high standard of specialised products and services in fire and emergency response, consultancy, planning and training programs.

QuickFire EM currently provides emergency response training services throughout Australia to many organisations including hospitals, aged care facilities, commercial and residential high rise buildings, hotels and entertainment venues.

Please contact us if you are considering a change in your current provider. We can offer a professionally managed fire and emergency planning consultancy service.

 Training and Planning**

QFEM will assist your staff to effectively respond to ANY Emergency within your workplace.

QuickFire Emergency Management (QFEM) has been providing fire and emergency related services to organisations in Australia since 2002. We are committed to reducing the risk of injury in the workplace, due to fire or other emergencies. Our site specific Emergency Plans and training programs are imbedded in a vast array of organisations which has enabled those facilities to meet their legislative and duty of care requirements.

It is a requirement of the Workplace Health & Safety Regulations that *Responsible Officers* administer their legal obligation to protect building occupants in the event of ANY emergency situation. Legislative requirements and Building Codes are designed to ensure the safety of all people in the event of fire or other life threatening emergencies in the workplace. Our services cover all aspects of these requirements and include the following:

Fire Safety Design

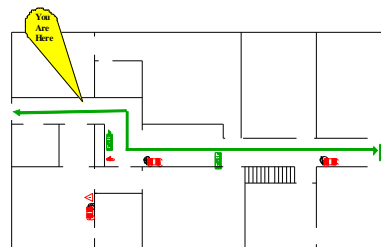

We have extensive experience regarding the sensitive areas surrounding health care buildings and in particular aged care facilities, but we can also assist in the design of a fire safety system that will suit any organisation's needs.

Fire Safety Consultancy

QFEM consultants have comprehensive knowledge and experience of all aspects of the fire industry and are conversant in building design legislation as well as duty of care requirements for building owners and occupiers.

Emergency Evacuation Diagrams

QFEM specialises in people movement and people's behaviour in fires and have developed a user-friendly format for evacuation diagrams. The diagrams provide information on building layout, the location of essential items such as fire fighting equipment and site plan features. QFEM can also review existing diagrams and upgrade them in line with any building modifications—ensuring full compliance to the relevant Australian Standards.

Risk and Hazard Assessments

QFEM can provide detailed reports on the full gamut of building fire safety deficiencies including advice on fire extinguisher locations and emergency response procedures. QFEM will provide you with the relevant information necessary to maintain a safe and compliant workplace.

Development or Review of Emergency Plans

The development of *site specific* Emergency Response Procedures is QFEM's CORE BUSINESS. With over thirty years professional experience in the fire safety industry we will provide you with the best product for your organisation, staff and business needs. Existing Emergency Plans can also be modified to ensure your organisations duty of care and legislative requirements are continually addressed. All of our Emergency Plans are designed in accordance with the relevant Australian Standards and best practice.

Training Sessions

As with the development of Emergency Plans the delivery of *site specific* training sessions directly to your staff is a core component of QFEM's business delivery. All training is conducted on-site to implement an organisation's Emergency Response Plan and will ensure that, in the event of ANY emergency within the workplace, a consistent and predictable response is followed by staff. QFEM can also provide specialised training and familiarisation for all types of systems including Fire Indicator Panels (FIP), Occupant/Emergency Warning Systems and Emergency Warning Intercommunication Systems (EWIS). Other specialised training can be conducted for at risk groups for all threats—including bomb. Our training focuses on specific responses by staff and also provides for practical adaptation and scenarios for staff.

Refresher Training

Ongoing refresher training for all staff / ECO members has been specifically designed to continually develop their knowledge-base over time. We recommend that refresher training be conducted on 6 monthly intervals (depending upon the nature of risk to the organisation or workplace).

Practice Evacuations

Our Consultants will organise and conduct practice evacuations in your building to ensure staff are provided with feedback on their performance in an emergency response. Practice Evacuations will performance test the training that staff have been exposed to and will include highlighting the positive aspects of a particular response as well as areas that require a greater level of efficiency.
